Scovill® *Bjeweled*™ Button & Burr Closures..Simply Sparkle with Style

Buttons.....
Sparkle with
Style

New *Bjeweled*™ closures from Scovill sparkle with style and fashion. Available in a wide range of basic types of tack attached shank buttons, and burrs, Scovill *Bjeweled* closure products offer many options for designers interested in “dressing up” basic denim garments, or adding that special touch of style to leisure and dress clothing.

Shank button constructions include flex back, and standard shank back styles, with shell choices of die cast or stamped types. Shell sizes include 24/ to 32/ for stamped shells and even larger ligne sizes for die cast shells.

The standard burr style is a capped burr encapsulating the jewel but there are different options available for decorative designs or logos on the flange of the burr to compliment the jewel.

Choices in jewel types for both buttons and burrs include diamonds, rhinestones, garnets, rubies, emeralds, and amethysts, all faux of course, but the sparkle, shine, and classic appeal of jewels burst with design and style possibilities.

To insure that the jewels aren’t damaged during the attaching process the shells, both die cast and stamped, used in the button and burr styles are thicker than normal shells providing rigid support that transfers the attaching force away from the jewel inserts. This feature minimizes any damage or cracking to the jewels through the attaching process.

Find out why more and more apparel brands and retailers are now certifying Scovill® *Bjeweled* fasteners for use on their garments. For more information on specifying or purchasing Scovill® jewel fasteners, contact Scovill at Scovill Fasteners (HK) Ltd. at +852 (3658) 7700, e-mail bmoore@scovill.com, or Scovill Fasteners, Inc. at 1-888-726-8455, e-mail info@scovill.com.
