

Committed to Our Resources and Environment

## MORITO SCOVILL

We are proud to introduce our latest line of fasteners that conform to Morito Scovill Americas' C.O.R.E. manufacturing standards. These fasteners eliminate the need for resource heavy processes such as electroplating, sandblasting, color filling and paint baking. By removing these processes from our production, we will consume significantly less water and power while decreasing our emissions during production.

Most of our finishes are available in buttons, burrs and snaps and cover a wide range of color variations to suit any design. Let Morito Scovill Americas help you create the ideal sustainable garment by utilizing our C.O.R.E. standards.
